الاختبار التكويني الثالث 2024 - 2025

زمن الاختبار

ساعة و نصف

الصف

الثاني الثانوي

المادة

Advanced Physics

**Group (1) : CORRECT the under line TPK1 (6 min )**

| No. | Question   |
|-----|--|
| 1   | When you scuff your shoes across a nylon carpet produce a <u>dynamic electricity</u> |
| 2   | It is called static because the charges <u>flow</u> through the conductor.           |
| 3   | Charge is <u>a vector</u> quantity   |

**Group (1) : answer the following TPK1(8 min )**

| No.    | Question                                       |
|--------|--|
| 4<br>5 | State two things of Uses of static electricity |
| 6      | Define insulator                               |
| 7      | Mention the measuring unit for electric charge |

**Group (1) : True or false with correct answer TPK1 ( 6 min )**

| No. | Question  |
|-----|---|
| 8   | <b>Like charges repel each other, while opposite charges attract.</b>                   |
| 9   | <b>When a strip of polythene rod is rubbed with cloth it becomes positively charge</b>  |
| 10  | <b>Materials that do not allow electric charges to flow freely are called insulator</b> |

**Group (2) : True or false with correct answer TPK2& TPK3 ( 8 min )**

| No. | Question  |
|-----|---|
| 11  | <b>Electrostatic forces are governed by a simple relationship known as Coulomb's law and are most conveniently described by using the concept of magnetic field</b> |
| 12  | <b>The two forces between two charges are equal in magnitude but opposite in direction</b>  |
| 13  | <b>Coulomb found the force <math>F</math>, varied directly with the squared of the distance between the centers of the spheres</b>                                  |
| 14  | <b>Coulomb found how the force between the two charged spheres, A and B, depended on their charges</b>  |

**Group (2) : Choose the correct answer TPK2 & TPK3 ( 6 min )**

| No. | Question   |                                      |
|-----|--|--------------------------------------|
| 15  | <b>What is the unit of the value of the proportionality constant in Coulomb's law</b>                      |                                      |
|     |  |                                      |
|     |  |                                      |
| 16  | <b>electrostatic forces are of great importance in .....</b>   |                                      |
|     | <b>a- chemistry</b>  | <b>b- technological applications</b> |
|     | <b>c- biology</b>  | <b>d- all of them</b>                |
| 17  | <b>When the distance between two charged particles is halved then the force between them becomes .....</b> |                                      |
|     | <b>a- doubled</b>  | <b>b- increase four times</b>        |
|     | <b>c- decreases to halve</b>   |                                      |

**Group (2) : Complete the following statements TPK2& TPK3 (6 min )**

| No. | Question   |
|-----|--|
| 18  | after we charge both plastic rods by rubbing them with the piece of fur, we find that the rods ..... each other. |
| 19  | when we rub glass rods with silk, the glass rods also become charged and ..... each other                        |
| 20  | charged plastic rod ..... a charged glass rod  |

**Group (2) : Solve the following TPK2 & TPK3( 10 min )**

| No.      | Question  |
|----------|---|
| 21<br>22 |   |
| 23<br>24 | <b>What is the force between two small charged spheres having charges of <math>20\mu\text{C}</math> and <math>30\mu\text{C}</math> placed 20 cm apart in air?</b> |

**Group (3) : correct the under line TPK4 ( 6 min )**

| No. | Question   |
|-----|--|
| 25  | The electric field is a <u>scalar</u> quantity                                       |
| 26  | The instrument used for measuring the electric field is known as <u>galvanometer</u> |
| 27  | the electric field intensity is measured in <u>Newton</u>                            |

**Group (3) : Choose the correct answer TPK4 ( 6 min )**

| No. | Question   |  |
|-----|--|--|
| 28  | a stationary positive charge has electric field lines pointing .....       |  |
|     | A) Inwards   | B) Right                                     |
|     | C) outwards  | D) Left                                      |
| 29  | The force acting on an electric charge inside an electric field depends on |  |
|     | A) amount of charges   | B) The diameter                              |
|     | C) the distance between them   | D) Both A and C.                             |
| 30  | The type of force between two charges                                      |  |
|     | A) Always repulsion force  | B) Always attraction force                   |
|     | C) Independent on the type of electrical charges                           | D) Depends on the type of electrical charges |

**Group (3) : Solve the following : TPK4 ( 8 min )**

| No.      | Question  |
|----------|---|
| 31<br>32 | <b>A force of 3 N acts on the charge which is found in a uniform electric field <math>E = 12 \text{ N/C}</math> .<br/>Determine the force on the charge</b> |

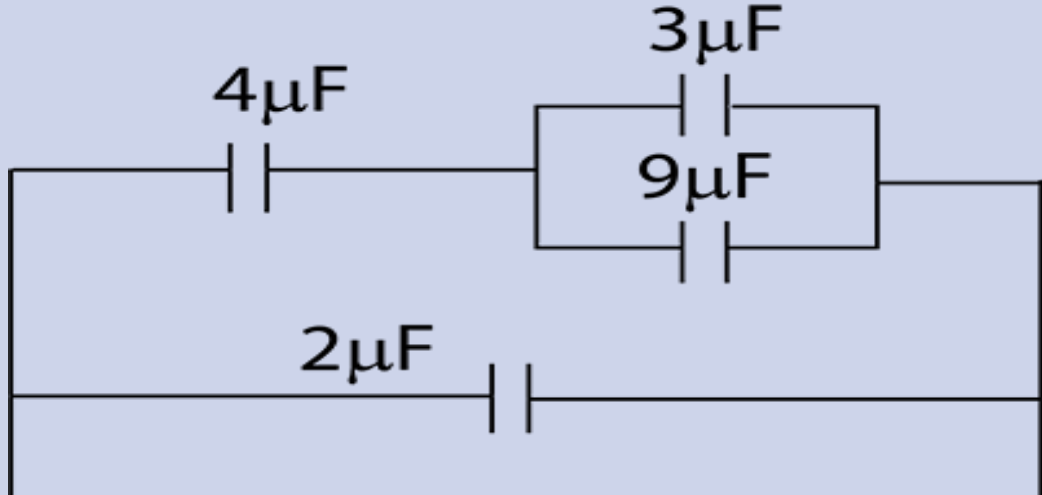

**Group (4) : True or false TPK4( 6 min )**

| No. | Question   |
|-----|--|
| 33  | When the capacitor is charged, both plates are charged positively          |
| 34  | An electric field is only generated surrounding a negative electric charge |
| 35  | The electric field exerts force on other charges.                          |
| 36  | The electric field intensity is the electric field lines per unit volume   |

**Group (4) : Choose the correct answer TPK4 ( 6 min )**

| No. | Question  |                       |
|-----|---|-----------------------|
| 37  | The unit of capacitance is  |                       |
|     | A) farad  | B) newton             |
|     | C) ampere   | D) Ohm                |
| 38  | If a $20\ \mu\text{F}$ capacitor is connected to a $10\ \text{V}$ source, the charge is |                       |
|     | a) $20\ \mu\text{C}$  | b) $200\ \mu\text{C}$ |
|     | c) $2\ \mu\text{C}$   | d) $0.5\ \mu\text{C}$ |

**Group (4) : solve problem : TPK4 (8 min )**

| No.      | Question   |
|----------|--|
| 39<br>40 | <p data-bbox="415 539 1350 596"><b>Find the equivalent capacitance</b></p>  <p>The circuit diagram shows a series combination of three components. The first component is a <math>4\mu\text{F}</math> capacitor. This is followed by a parallel combination of two capacitors, <math>3\mu\text{F}</math> and <math>9\mu\text{F}</math>. Finally, there is a <math>2\mu\text{F}</math> capacitor in series with the parallel combination. The entire circuit is connected between two main terminals on the left and right.</p> |
